Remember:

oral convenience improves patient compliance and so reduces the chance of relapse.

Presentation: white, flat, half-scored uncoated tablets marked 'Janssen' on one side and 'K/200' on the reverse. Each tablet contains 200 mg ketoconazole. Dosage (for vaginal candidosis only): two tablets (400 mg) once daily for 5 days. For maximal absorption Nizoral should be taken with meals. **Nizoral is contra-indicated in pregnancy.** Precautions: the use of agents which reduce gastric acidity (anti-cholinergic drugs, antacids, H₂-blockers) should be avoided and, if indicated, such drugs should be taken not less than 2 hours after Nizoral. Ketoconazole, when given together with cyclosporin A results in increased blood levels of cyclosporin A. It is important that blood levels of cyclosporin A are monitored if the two drugs are given concomitantly. Side-effects: nausea, skin rash, headache and pruritus may occasionally be observed. Alterations in liver function tests have occurred in patients on ketoconazole; these changes may be transient. Cases of hepatitis have been reported with an incidence of about 1 per 10,000 patients. Some of these may represent an idiosyncratic adverse reaction to the drug. This should be borne in mind in patients on long-term therapy. If a patient develops jaundice or any symptoms suggestive of hepatitis, treatment with ketoconazole should be stopped. Mild asymptomatic increases of liver enzyme levels, on the other hand, do not necessitate discontinuation of the treatment.

GOOD DRUGS DON'T GROW ON TREES

*In the prehistoric days of medicine
some drugs could be found
growing on trees.*

Today that's a bit different.

*The therapeutic drugs of our times
are being unmasked from nature
rather more scientifically.*

*By thorough bio-medical research
into the fundamental processes of life.
By studying exactly why and how
these processes sometimes go wrong.*

*And so nature shows man where and how
he can intervene and defend himself.
With precision drugs that will selectively
and safely correct what went wrong.
Today's drugs grow from man's scientific
knowledge of nature —
but no longer on trees.*
